History AutoCAD is one of the most popular CAD programs in the world. As of September 2018, the Autodesk Official 2017 Annual Report listed AutoCAD as its most-used product for Desktop and Cloud users, and its number one selling software, in the commercial software market. The report stated that as of September 30, 2018, there were 2.9 million CAD users worldwide, of which 1.3 million were active users. It also stated that as of the same month, almost 80% of the Autodesk certified partners were providing solutions for AutoCAD. AutoCAD History AutoCAD History by Autodesk - youtu.be AutoCAD's origins can be traced to 1977, when Paul Renneisen and Ron Ridenour of Dennis Publishing created the first AutoCAD. AutoCAD was originally designed as a technology demonstration project in response to the needs of Paul's office in Longmont, Colorado. AutoCAD I was quickly followed by AutoCAD II. Originally, AutoCAD ran on an Apple II and was sold at retail outlets for US$500. But due to its high cost, Autodesk decided to use it as a promotional tool for their new product, the Xerox Alto. Autodesk sold the application to the Xerox Corporation for $125,000, so that Autodesk could get their hands on the Alto. The resulting program was AutoCAD-X, which replaced the Apple II in the Apple II/IMP/PFS line of computers. To make the new program look more like its predecessor, the flat text and user-friendly menu design were dropped and replaced with a 3D modeling environment. The new user interface is still similar to today's AutoCAD. In 1981, Autodesk bought Dassault Systemes, the makers of a similar program called AutoCad, which was not as popular as AutoCAD. Renneisen, then vice president of Products, was given control of AutoCAD's product strategy and development. One of Renneisen's first objectives was to make AutoCAD as simple and intuitive as possible so it would appeal to engineers and architects as well as design students. In addition, Renneisen wanted to make the program smaller and faster, and wanted to make it easier to learn. This led Renneisen to scrap the 2D drafting functions and make AutoCAD's 3D environment the standard. He added object

VisualLISP is an application programming interface designed to manipulate AutoCAD. C++ based classes and custom objects can be called from VisualLISP. VisualLISP is also used as a scripting language for the integration of AutoCAD with third-party applications. VisualLISP is used for script-enabled, line-based workflow automation, integration and customization for AutoCAD. The set of AutoLISP/LUA functions is available in a single package. In 2014, it was reported that Autodesk had begun to work on a new scripting language (MXL) which uses JavaScript and is supported by both AutoCAD and AutoCAD LT. Visual Studio.NET, AutoLISP or VisualLISP extensions for AutoCAD The following is a list of AutoLISP (VisualLISP) extensions for AutoCAD that are available from Autodesk. Also, Autodesk has licensed code from IBM to use in some of its AutoCAD products. AutoLISP/VXL extensions include: VXL, an extension of VisualLISP, which is used for building 3D models in AutoCAD. AXL, another extension of VisualLISP, which allows you to define geometric objects, specify them using XML, and edit them using XPath or other XML-based languages. VXL Builder is a VisualLISP extension for building 3D models in AutoCAD. XML, an XML-based language designed to extend VisualLISP, allowing creation of complex models in AutoCAD. VXL Builder and XML are extensible using VisualLISP. Version history When Autodesk released AutoCAD in 1984, the programming languages that were supported were COBOL, PL/I, and APL.

Lisp was the first supported language, in 1985. However, no one ever learned the Lisp programming language to support it. Visual Basic 3.0, released in 1990, was the first major step away from Lisp. Until this point, Lisp was considered an "exception" in Autodesk because the language was not supported by the company. Later, VisualLISP, which is based on Visual Basic, was introduced. Then in 1994, VisualLISP 4, or VXL 4, was released. It was a major milestone in the evolution a1d647c40b

The Department of Housing and Urban Development (HUD) is seeking public comment on how best to address the practice of landlords "flipping" or "flipping" a property in order to make an illicit profit. The agency is asking for public comment on what it will need to do to get state and local governments to join in its efforts to combat this practice. Flipping is when real estate owners artificially increase the value of a property and sell it for a profit. Many owners use real estate investors to buy their property and "flip" it, giving the investor the difference between the original selling price and what the property is now worth. ADVERTISEMENT HUD estimates that since 2009, at least 150,000 homes have been sold at prices higher than what was originally sold for. The agency has already taken enforcement action against some of the individuals involved in flipping, but says that many are still flippin' even after being hit with penalties. In announcing the public comment process, HUD announced that it would look to the states and local governments for help in getting to the bottom of the problem, and it is asking for their input. "We are seeking public comment to assist us in identifying possible legislative changes, actions that the private sector can take, and enforcement options that the states and local governments can use," HUD Secretary Julián Castro said in a statement. "Flipping — whereby house sellers take advantage of the housing market to make a quick profit — has been a problem for years, and there have been efforts to address it from state to federal level," he said. "However, we continue to see investors using techniques like mortgage fraud, dirty tricks, bribery and threats to harass, intimidate and coerce the owners of homes to put them on the market for a price higher than what they sold them for. "I am hopeful that all involved can work together to find a solution, because the safety and security of our communities cannot be left to the all-too-capable hands of shady real estate owners and flippers."A review of the chiropractor's role in pregnancy.
